

## Red, White & No Blues

After all the time spent polishing, bleaching and brushing your pearly whites to shine and sparkle, the last thing you want it to have stains for your love of red wine.

WineStraws are specifically designed to let you enjoy your red wine without compromising your smile.

You know only a woman would think this is a problem that needs a solution. After years of development and extensive testing, Jenny La Fever developed straws specific to drinking red wine without worrying about teeth stains.

The WineStraw features a smaller inner-diameter than the average drinking straw, so the flow of wine into the mouth is just like sipping from a glass. Also the straws deliver wine directly to the back of the palate, which wine enthusiasts prefer, as compared to the tip of the tongue.

The straws are made from BPA-free and FDA-approved plastic and are reuseable — just rinse with warm water.

Drink red, smile white and enjoy...

*Winestraws are available in a pack of 4 for \$2.99 or pack of 12 for \$6.99 at [winestraws.com](http://winestraws.com)*
